REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or fairly teach a method of operating a CMP system, comprising: obtaining a sensor signal from an electric drive assembly driving a pad conditioner of the CMP system; estimating a first condition of the pad conditioner and a second condition of a polishing pad in contact with the pad conditioner on the basis of the sensor signal; and predicting a remaining lifetime of the conditioning surface of the pad conditioner on the basis of the first estimated condition and a remaining lifetime of the polishing surface of the polishing pad on the basis of the second estimated condition; or a method of controlling a process sequence including a CMP process, comprising: obtaining a signal from a conditioner drive assembly of a CMP system, the signal being indicative of at least one of a motor torque and a speed of a motor of the drive assembly; estimating a condition of a polishing pad of the CMP system on the basis of the signal and adjusting at least one process parameter in the process sequence on the basis of the estimated polishing pad condition. The closest prior art, to Moore, 6,306,008 or Elledge, 2004/0089070 disclose monitoring the condition of the conditioning member, but not estimating the remaining live time of the conditioner or estimating a condition of the polishing pad and adjusting the at least one process parameter based on that estimation. Both Moore and Elledge sense a condition of the conditioner, but use the information to control the conditioning process, or to determine the endpoint of polishing, and not to estimate the remaining useful life of the conditioner, or to estimate the pad condition to control polishing.
